Overview

I strive for excellence in any work environment I find myself in. I have been around computers and video games since I was a child and am determined to use that knowledge to create software that shapes the world of technology in influential new ways. I want to apply everything that I have learned over the years both on my own and in college to be able to solve problems at the forefront of the industry. My involvement with Phoenix Defense has shown me how separate teams of a larger company function both interdependently and independently.

Education

South Florida State College, *Avon Park*, FL, May 2019

- Graduated Summa Cum Laude (Associates Degree)

University of Central Florida, *Orlando*, FL, December 2021

- Studying Computer Science

Skills (See Github link)

- Coding in C, Java, C#, C++, Haskell, Python, and Erlang
- Certified in Microsoft Word, PowerPoint, and Excel
- Using Bash/Unix command lines
- Source control (Github/Plastic)
- 3D Modeling (Blender)
- Running/managing virtual machines
- Experienced with Jira
- Full-stack Web Dev (LAMP & MERN stack)
- Infrastructure as code (IaC)
- Edge detection (Sobel, Canny)
- Object detection (Viola-Jones)
- CyberSecurity (StigViewer, Continuous Monitoring Tool (CMT))
- Threat detection (Nmap scans, Nessus)

Work Experience

Phoenix Defense, Cybersecurity Internship, July-December 2021

- I am currently working at an internship where I am working with two veterans of the industry to solve any security risks that may arise. Additionally, I'm automating previously human security checks to free up time for others to invest into more important tasks.

Projects of Note (See Github link)

TAKGM (Team Awareness Kit Game Master), Project Manager, Spring 2021 – Fall 2021

- Military simulation software developed in Unreal Engine. I manage the AI team and oversee their tasks, whilst also serving as their pipeline to our sponsor & World team.
- This link contains the second and final tech demo for this project, commentated by me. https://www.youtube.com/watch?v=5eNF45cSvzc

Neuropathy, Lead Developer, Ongoing

- 3D third-person video game that I am creating with a friend in Unreal Engine that revolves around hacking and heist-based gameplay.

Eventree Calendar App, Database/BackEnd, Spring 2021

- An event planning website and phone app with JWT validation, and MD5 hashing for security purposes

Spira Contact Manager, Database/BackEnd, Spring 2021

- Website that is designed to function similarly to the contacts app on a phone.

References

Alan Clarke (760) 213-1411, alan.clarke@hq.dhs.gov

- A LtCol of the USMC, Commandant of the Marine Corps at the Department of Homeland Security. He is the sponsor for my TAKGM project and is hoping to start his own military simulation SME (Small & Medium size Enterprise)

Tom Harris, tom.harris@aitengineering.com

- One of the two veterans of the Cybersecurity industry who personally mentored me at Phoenix Defense. I was one of the first two Cybersecurity interns ever hired at this company so they worked with us diligently to teach us as much as they could and gave us impactful and meaningful tasks related to the company.
